In that event, or in the event that Federal law restrictions apply, such warranties are limited in duration to a period of ninety (90) days from the date of delivery of the Product to the original end user. No warranties apply after that period.

ON-SCREEN ICONS

DIRECTIONAL ARROW

The directional arrow floats above your vehicle in the middle of the screen and points in the direction of the active mission. The color of the arrow will change depending on how far you are from your target. While far away from the mission target the color of the arrow will be green. As you get closer it will change to yellow, then to red once you are very close.

MISSION BAR

Across the bottom of the game screen is the Mission Bar. This bar highlights the current mission and shows your progress. The icon for the current mission will scroll to the center of the Mission Bar and have a flashing frame around it. Once you have finished the mission, a badge will be displayed above it to show how many times you've completed it. You can complete each of the missions up to three times.

POLICE BADGE

AMBULANCE BADGE

FIREFIGHTER'S BADGE

SPEEDOMETER

On the bottom right hand portion of the game screen is your speedometer. You can tell how fast you're going, and also see how collisions slow you down!

TARGET ARROW

The green target arrow will bounce above or below the target for the active mission. This will help you find the target of your mission on screen. Simply drive up to the target to complete the mission.

VEHICLES

POLICE CRUISER

The police vehicles are the fastest and most maneuverable. It will take a lot of practice and quick reflexes to maneuver through the streets while chasing down criminals.

AMBULANCE

The ambulance is larger but less maneuverable than the police car and smaller but more nimble than the fire engine. It will take a bit of finesse to quickly steer your way to the hospital while transporting injured passengers.

FIRE ENGINE

The fire engine is the heaviest and most powerful vehicle you can drive. Its weight and horsepower will require all of your strength to weave your way through traffic and get to your emergencies in time.

VEHICLE UPGRADES

As a reward for a job well done, you will receive three cool vehicle upgrades. A new police vehicle, fire truck, and ambulance will be awarded to you the first time you complete all nine of the missions for each vehicle.

VEHICLE SELECTION

There is a vehicle switching spot located at every fire station, police station, and hospital in the game. To switch vehicles, simply drive to one of these buildings and park your vehicle near the rotating vehicle symbol. Once your vehicle comes to a complete stop, the switch will automatically happen. For instance, to switch to the police car, drive to the nearest police station and park in the police parking lot.

Switch to the Fire Truck

Switch to the Police Cruiser

Switch to the Ambulance

CONTROLLING THE VEHICLES

Every vehicle can be controlled by either the keyboard or the mouse and you can switch from one to the other while playing the game. Use the one that feels the most comfortable to you. You may find that the keyboard works better for one vehicle, and the mouse works better for another. You may also use a joystick or steering wheel.

KEYBOARD

Left Arrow	Steer Left
Right Arrow	Steer Right
Up Arrow	Go Straight/Accelerate
Down Arrow	Brake/Reverse
Spacebar	Turbo Boost/Activate Siren

MOUSE

Left-Click	Accelerate
Right-Click	Brake/Reverse
Roll Mouse Right	Steer Right
Roll Mouse Left	Steer Left
Middle-Click	Turbo Boost/Activate Siren

THE MISSIONS

You will have your work cut out for you while being dispatched on calls scattered throughout the city. There are nine unique missions to complete per vehicle. Each mission may be completed three times. Complete all 81 missions to receive your commendation from the mayor.

DISPATCH VOICE

Each time an emergency call is placed, a dispatcher will notify you of the call and the mission bar will switch to that mission. The dispatcher will periodically remind you of the mission until it is completed.

CARGO FIRE

AMBULANCE MISSIONS

You will need nerves of steel to handle the distress calls coming in from all over the area. The citizens are depending on you to help treat the injured. Some missions may require you to transport the more serious cases to the hospital.

HOUSE FIRE

A house is on fire and the fire trucks are already on their way. You have been dispatched to provide support for the residents.

KEEPING FIT

A person on in-line skates has taken quite a nasty spill in the park. Find the victim and get her to the hospital.

OLD MINE

A mineworker has injured himself on the job. Rush to the scene and tend to his injuries.

EMERGENCY PATROL™ SETUP TOOL

These setup options will allow you to optimize the performance of Emergency Patrol™ CD-ROM on your computer.

DEVICE

Select **Hardware Accelerated** if your computer has a 3D hardware accelerator card. Select **Software** if it does not, or if you have trouble running the game with your hardware card.

LEVEL OF DETAIL

This will adjust the overall look of the game. Lowering the level of detail will improve the performance of the game on your computer.

CONTROLLER OPTIONS

If you have a joystick or steering wheel plugged into your computer, then you can turn them on or off using this option.

- Click on the **OK** button to save settings changes and exit.
- Click on the **Cancel** button to exit without saving any settings changes.
- Click on the **Defaults** button to reset all options to the original settings.
- Click on the **Advanced** button to make changes to the advanced settings.

Below are descriptions of the options accessed using the advanced setup.

GRAPHIC OPTIONS

DEVICE

There are three different video modes for Emergency Patrol™ CD-ROM. Each mode presents a different level of performance and level of graphics.

PRIMARY DISPLAY DRIVER (DISPLAY)

Direct3D®—Select this mode if your computer has a Direct3D®-compatible hardware video accelerator card.

Software—Select this mode if your computer has a Pentium® 266mhz processor or better, but does not have a hardware video accelerator card.

Software (faster/lower quality)—Select this mode if your computer has slower than a Pentium® 266mhz processor and does not have a hardware video accelerator card.

DIRECT3D® OPTIONS

HARDWARE T&L

When enabled, the video card's hardware T&L (transformation and lighting) capabilities will be fully exploited when available. Useful on certain video cards. Renderer performance is significantly higher when this feature is enabled and available.

W-BUFFERING

When checked, W-buffering is used instead of regular Z-buffering. Distant objects will look better when W-buffering is enabled, but is not as compatible as Z-buffering. (Automatically disabled on 3dfx hardware.)

FOG

Effect used to disguise the loading of objects in the distance. Controls vertex fogging. When checked, vertex fogging is enabled. Disable for a small speed boost.

TRILINEAR FILTERING

When speed is more important than quality, disable this option. Controls the type of mipmap filtering used. When checked, more than one mipmap level will be sampled during texturing, which looks better than regular mipmapping. You may disable this feature when necessary.

CAR SHADOW

When checked, shadows are enabled. Older video cards cannot handle the requirements for shadows, so disable if the shadows appear distorted.

DIRECTDRAW OPTIONS

PAGE FLIPPING

Controls vertical retrace synchronization between page flips. When checked, vertical retrace synchronization is enabled. This looks better (no shearing), but is less efficient.

Note: Not all drivers allow this feature to be directly controlled by the user.

HARDWARE BLITTING

Controls hardware blitting. When checked, hardware blits (short for "BitBlit" or "Bit Block Transfer") will be enabled.

CITY RENDERING DEPTH

On slower machines, decrease this setting for a speed boost. Controls how much of the city is rendered around the camera. The higher the setting, the more geometry is rendered, but the longer it takes to generate each frame.

RESOLUTION

Try lower resolutions, such as 320x240, on slower machines. The lower the resolution, the faster the game will play. 640x480 is the default.

TEXTURE QUALITY

The higher the setting, the larger the textures. Larger textures require more memory. Decrease this setting in slower machines or machines with little memory.

CONTROLLER OPTIONS

These options will help you configure peripheral controls. You may need to configure these peripherals through Windows® as well.
